

IRAN -> TÜRKİYE - Startup Legal Landing Partnership

A proposed strategic partnership between Iranian-Turkish Legal Group + Türkiye Startup Landing Platform

2026-09-12

From Exhibition -> Legal Entry -> Turkish Company -> Corporate Partnership -> Investment

1. The Opportunity

Every year, Iranian founders and technology teams participate in exhibitions, technology events and startup programs. They meet Turkish companies, investors, accelerators, technology parks and potential customers.

But after the event, a critical question remains: "How do we legally and practically continue in Türkiye?" That is the gap we want to solve.

2. The Proposed Platform

We are developing a Türkiye Startup Landing Platform that moves selected international startup teams from

Exhibition -> Market Entry -> Turkish Business Operation -> Corporate Partnership -> Investment.

The first target market is: Iranian technology startups entering Türkiye.

3. Why a Legal Partner Is Essential

A startup cannot safely enter a new market with only travel support, hotel booking, networking and AI tools. It needs a qualified legal pathway.

The platform therefore seeks a Strategic Legal Landing Partner with expertise in:

- Iran-Türkiye cross-border matters
- Corporate law
- Company formation
- Commercial contracts
- Immigration / residence pathways
- Employment
- Intellectual property
- Tax coordination
- Investment agreements

Professional legal activity in Türkiye is regulated by the bar associations and foreign lawyers cannot simply practise as Turkish lawyers. The partnership is therefore structured with lawyers qualified in Türkiye, and the legal partner - not the platform - defines and confirms every permissible pathway.

4. Proposed Role of Iranian-Turkish Legal Group

We propose establishing a dedicated Iran-Türkiye Startup Legal Desk within the broader

Startup Landing Platform. The Desk becomes the first legal point of contact for selected startup teams entering Türkiye.

5. Startup Journey

STEP 1 - Selection

Elcom, GITEK, startup competitions, universities, accelerators, startup communities.

STEP 2 - Pre-Landing Legal Assessment

The legal partner reviews founder structure, current company, IP ownership, contracts, team members, intended activities in Türkiye and possible legal structures.

STEP 3 - Türkiye Entry

The team receives professional guidance concerning applicable visa, residence, work-authorization and company-formation pathways. No guaranteed immigration result is promised.

STEP 4 - Turkish Business Structure

Turkish subsidiary / Turkish company / branch or representative structure where appropriate / other legally suitable structure.

STEP 5 - Commercial Launch

Corporate contracts, partnership agreements, employment arrangements, IP protection, commercial compliance.

STEP 6 - Investment

Investment, shareholding, founder arrangements, due diligence, commercial partnerships.

6. Two-Layer Legal Model

Layer 1 - Market Entry Legal (before the startup arrives)

Immigration · Company · IP · Contracts · Compliance · Founder structure

Layer 2 - Investment & Growth Legal (after landing)

Corporate agreements · PoC contracts · Investment documentation · Shareholder agreements · Due diligence · Strategic partnerships

The same startup can therefore remain inside the legal partner's ecosystem as it grows.

7. Why This Is Valuable for the Legal Group

This is not simply a referral arrangement. The platform creates a Qualified Startup Client Pipeline: instead of random inquiries from founders who may not be ready to operate in Türkiye, the legal partner receives pre-screened teams with:

- Startup profile
- Founder information
- Business model
- Technology
- Funding stage
- Intended Turkish activity
- Legal requirements
- Corporate targets

The lawyer enters the process earlier.

8. New Client Segment

The partnership creates a specialised client category - International Startup Clients - especially Iranian startups, technology founders, AI, SaaS, ClimateTech, HealthTech, IndustrialTech, FinTech (where legally permitted) and DeepTech companies. The long-term model can expand beyond Iran.

9. Legal + Hotel + Corporate Ecosystem

HOTEL (Accommodation Sponsor)

v

LEGAL PARTNER (Legal Landing Desk)

v

CORPORATE SPONSOR (Market / PoC Partner)

v

INVESTOR (Capital)

v

STARTUP (Technology + Team)

Hotels contribute unused room-night inventory instead of cash and become Official Startup Accommodation Partners in the mapped cities (Istanbul, Ankara, later Izmir and Antalya). The platform coordinates the ecosystem.

10. Corporate Sponsor Model

A Turkish company sponsors a selected startup - e.g. a Turkish industrial company sponsoring an Iranian industrial-AI startup. The startup enters Türkiye, the legal partner establishes the contractual framework, and the two run a Proof of Concept. If successful, a commercial contract, investment or strategic partnership can follow. This turns legal work from a one-time company registration into a long-term commercial relationship.

11. AI Layer

The platform includes an AI Startup Navigator that organises the legal checklist, market research, corporate matching, investor research, meeting preparation, media/PR and startup documentation.

AI does not replace the lawyer. It prepares, organises and routes information.

The licensed legal professional remains responsible for legal advice.

12. Legal AI Safety Principle

The platform explicitly distinguishes AI Information from Professional Legal Advice:

- The AI may say: "These are the documents/questions that may need to be reviewed."
- The legal partner decides: "This is the legally appropriate route for this specific client."

This protects the professional role of the legal partner and is enforced in code (guarantee language is stripped; immigration determinations are escalated to a human).

13. Proposed Commercial Model

Model | Structure | Value for the legal partner

A - Referral | Platform introduces a qualified startup; partner contracts directly with it | Direct client engagement

B - Preferred Legal Partner | Designated Official Legal Landing Partner of the program | Exclusive qualified pipeline + branding

C - Startup Legal Package | Pre-Landing Assessment -> Company/Market Entry -> Commercial Setup -> Ongoing support | Predictable, repeatable engagements

D - Corporate Legal Support | Partner also represents Turkish corporate sponsors and investors | Value on both sides of the transaction

Any referral/fee arrangement must comply with the applicable Turkish bar rules - the legal partner confirms what is permissible.

14. What We Are Asking From the Legal Group

We are not asking for free legal work. We are proposing a strategic partnership in which the legal group helps design the legal architecture of the program:

1. Review the startup landing model.
2. Identify legally permissible pathways.
3. Define the legal services required for each stage.
4. Design a standard Startup Legal Intake Form.
5. Define a Pre-Landing Legal Assessment.
6. Define appropriate company / contractual structures.
7. Establish a professional referral mechanism.
8. Participate as the program's preferred legal partner if mutually agreed.

15. What the Platform Provides

Qualified startup leads · pre-screened founder teams · startup profiles · corporate introductions · hotel partnerships · exhibition partnerships · AI-assisted intake · international visibility · startup deal flow.

The legal partner focuses on legal expertise; the platform focuses on startup acquisition + ecosystem coordination.

16. Pilot Proposal - Istanbul Pilot

- First cohort: 10 startup teams
- Team size: 3 people
- Total founders / team members: 30
- Target ecosystem: hotels, Turkish corporations, lawyers, investors, accelerators, technology parks

The legal partner participates in designing the first cohort's legal landing framework.

Pilot funnel

100+ startups -> 30-50 screened -> 10 selected -> 10 legal assessments
-> 10 Türkiye landing plans -> corporate matching -> PoCs
-> investment / commercial partnerships

The goal is not simply to bring people to Türkiye. The goal is to create successful business cases.

17. Long-Term Opportunity

After validating the Iran -> Türkiye corridor, Türkiye can become a regional Startup Landing Hub - Iran, Central Asia, Caucasus, Middle East, South Asia. The legal partner becomes part of a broader International Startup Legal Network.

18. Why Us + Why You

Our platform | Legal partner
Startup discovery | Turkish legal expertise
Exhibition access | Iran-Türkiye understanding
AI layer | Corporate law
Hotel network | Immigration / residence expertise
Corporate matchmaking | Contracts
Media | Investment legal support

Together we can create the legal infrastructure for startup landing.

19. The Partnership

We propose beginning with a small, controlled pilot. No large infrastructure investment required.

Legal framework -> 10 startups -> Istanbul -> measure results -> improve -> scale

20. Success Metrics

Metric | Target
Startup teams | 10
Founders / team members | 30
Legal assessments | 10
Corporate introductions | 5+
PoC opportunities | 3+
Investment / commercial opportunities | 1-3
Repeatable legal landing framework | 1

21. Our Vision

We do not want to create another visa agency, startup tour or lawyer directory. We want to build Startup Landing Infrastructure, where a startup can move from "I met a Turkish company at an exhibition" to "I legally established my business relationship in Türkiye."

22. Proposed First Meeting

We would like to discuss three questions:

1. Is this legal landing model workable under Turkish law?
2. What should the legal pathway look like for a typical three-person startup?
3. Can your group become a strategic legal partner for the first Istanbul pilot?

IRAN -> TÜRKİYE

From Exhibition to Legal Landing

Startups x Lawyers x Hotels x Corporates x Investors
